GajaLens - Founder’s Critique Brief

Prepared by: Pramithi Nair, Founder - GajaLens Technologies Pvt. Ltd. **Prepared for:** The Lead Investor of the GajaLens €2 M seed round **Date:** April 2026 **Status:** Confidential · private circulation · not an offer to the public

---

Preamble - why this document exists

You have indicated that you are prepared to commit €2 million in seed capital to GajaLens on the strength of the pitch deck and the landing page you saw last week. Before signing, you asked me - the founder - to put in front of you an independent, adversarial critique of what you are about to buy. This document is the response.

It is not a marketing document. Nothing in these pages tries to convince you to invest. The pages below instead try, honestly, to show you where the offering is thin, where it is outright wrong, what I am doing about it, and the terms on which I am willing to ship.

The critique was produced through a multi-agent pipeline I designed and operated for this specific purpose. Three critique agents (regulatory, trust, and fact-check) ran in deliberate isolation so their findings would not converge. A grounding validator refused any finding that lacked a verbatim quote from the files themselves. An editor patched the artefacts. A prototype was built and is now reachable at the URL in Part D. A stress-test panel and a red-team trio then tested the ship/no-ship decision in Part E. A plan architect pulled the resulting regulatory workstreams into the budget in Part F. The orchestration diagram is attached as Appendix D.

What you should expect when you read this: fewer hero numbers, more caveats, and a ship decision with three non-negotiable conditions attached.

Part A: Regulatory Audit of Your Own Artefacts

The audit below applies to the **India** regulatory environment triggered by the problem statement. Because the brief referenced EU AI Act, GDPR, Irish consumer law, and sector-specific rules, I have mapped each of those to the Indian counterpart that actually binds a Bengaluru-incorporated company operating in Wayanad / Hassan / Valparai.

Regime mapping - the four bodies of law translated to India

Original regime	Indian counterpart actually applicable to GajaLens
EU AI Act (Reg. (EU) 2024/1689)	India has no horizontal AI statute. The functional equivalents are **NITI Aayog Responsible AI for All, 2021** (principles), **MeitY Advisory 1 March 2024** (under-tested AI requires permission, labelling, user consent), **BIS** AI standards (IS/ISO/IEC 22989, 23053, 23894), and biometric obligations under **DPDP Act 2023 s. 9** and **SPDI Rules 2011 Rule 3**.
GDPR (Reg. (EU) 2016/679)	**Digital Personal Data Protection Act, 2023**; **IT Act, 2000 s. 43A**; **SPDI Rules, 2011**; **IT (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021**.
Irish consumer law (CPA 2007 / UCPD)	**Consumer Protection Act, 2019**; **CCPA Guidelines for Prevention of Misleading Advertisements and Endorsements, 2022**; **ASCI Code**.
Sector-specific (insurance, securities, drones, wildlife)	Insurance: **Insurance Act, 1938 s. 42** + **IRDAI (Registration of Corporate Agents) Regulations, 2015**. Financial promotion: **Companies Act, 2013 ss. 23, 26, 42** + **SEBI Act 1992** + **SEBI (PFUTP) Regulations, 2003** + **FEMA, 1999**. UAS: **Drone Rules, 2021** (MoCA/DGCA). Wildlife: **Wild Life (Protection) Act, 1972** + **Forest (Conservation) Act, 1980** + **Biological Diversity Act, 2002** + **MoEFCC SOP on Human–Elephant Conflict, 2017**.

Audit findings

#	Artefact	Issue	Severity	Quoted Offending Text (verbatim from the files as the investor saw them)	Regulatory Basis	Recommended Fix
1	index.html	**Unsubstantiated AI performance claim** treated as a marketing guarantee, with no dataset, no confidence interval and no operating envelope.	**High**	*"94% - Elephant detection accuracy of our edge-AI model"* (stats band, hero section)	**Consumer Protection Act, 2019** ss. 2(28) & 89 (penalty up to ₹10 lakh and 2 yrs for false/misleading ad); **CCPA Guidelines 2022** Guideline 4 (claims must be capable of substantiation, contemporaneous with the ad); **NITI Aayog Responsible AI Principles, 2021**.	Replace the standalone "94%" with dataset size, FP/FN rates, operating envelope, link to a public model card, and the disclaimer "indicative pilot result, not a guarantee of field performance."

#	Artefact	Issue	Severity	Quoted Offending Text (verbatim from the files as the investor saw them)	Regulatory Basis	Recommended Fix
2	pitch.html	**Fabricated founder and team credentials** placed in front of a seed investor as fact. None of the listed employers, degrees or scale figures in the team bios can be evidenced.	**High**	*"Pramithi Nair - CEO, Wildlife Biologist. 12 years at Wildlife Trust of India. PhD elephant ecology, NCBS."* and *"Karthik Iyer - CTO, Computer Vision. Ex-NVIDIA Robotics. IIT-Madras. Built 3 production CV systems."* (Team slide)	**Companies Act, 2013** s. 36 (fraudulently inducing investment - up to 10 yrs imprisonment; fine up to 3× the amount); s. 447 (fraud); **Bharatiya Nyaya Sanhita, 2023** s. 318; **SEBI Act, 1992** s. 12A r/w **SEBI (PFUTP) Regulations, 2003**.	Remove every unevidenceable biographical claim. Replace with verified bios, dated CVs, LinkedIn URLs and citations for every quantitative claim.
3	index.html	**Insurance promotion without IRDAI registration.** Names an underwriter and makes a payout promise - textbook elements of insurance solicitation - with no agency contract in place.	**High**	*"Crop-loss insured. Bundled ICICI Lombard guarantee. If a tusk touches your harvest, we pay."* (feature grid)	**Insurance Act, 1938** s. 42 + **s. 102** (up to ₹1 crore penalty); **IRDAI (Registration of Corporate Agents) Regulations, 2015** Reg. 3; **IRDAI (Protection of Policyholders' Interests) Regulations, 2017**; **Consumer Protection Act, 2019** s. 2(28).	Remove the named underwriter and the "we pay" promise until a written corporate-agent or referral agreement is executed and IRDAI registration is in hand. Reposition as "insurance partnership in development."

#	Artefact	Issue	Severity	Quoted Offending Text (verbatim from the files as the investor saw them)	Regulatory Basis	Recommended Fix
4	index.html & pitch.html	**Personal data of website visitors routed to a US service** with no consent, no notice, no privacy policy. Both pages load Google Fonts directly from Google's US CDN. Visitor IPs are personal data under DPDP Act.	**High**	A stylesheet reference loaded directly from fonts.googleapis.com in the head of both pages (Fraunces + Inter font families), which transmits every visitor IP to Google's US CDN before any content renders.	**DPDP Act, 2023** ss. 4, 5, 6, 16 (lawful processing, notice, consent, cross-border transfer controls); **IT Act, 2000** s. 43A r/w **SPDI Rules 2011 Rule 4** (mandatory privacy policy); **IT (Intermediary Guidelines) Rules, 2021** Rule 3(1)(a). Penalty under **DPDP Act s. 33** + Schedule: up to **₹250 crore**.	Self-host the WOFF2 font files, delete every googleapis.com and gstatic.com request, publish a DPDP-compliant privacy notice with Data Fiduciary identity, grievance officer, and ss. 11–14 rights.
5	index.html	**No privacy notice, no Data Fiduciary identification, no grievance officer**, and a mailto collection point for enquiry data.	**Medium**	A *"Request a pilot"* button pointing to a mailto:hello@gajalens.in link, appearing twice (hero CTA and footer), with no link to any privacy notice anywhere on the page.	**DPDP Act, 2023** s. 5 (notice obligation), s. 8(9), s. 8(10); **SPDI Rules, 2011** Rule 4; **IT (Intermediary) Rules, 2021** Rule 3(1)(a).	Add a Privacy Notice naming the Data Fiduciary, purposes, lawful basis, retention, recipients, rights, grievance officer, India-side address. Add Terms of Use.

#	Artefact	Issue	Severity	Quoted Offending Text (verbatim from the files as the investor saw them)	Regulatory Basis	Recommended Fix
6	index.html & pitch.html	**Always-on perimeter AI vision with thermal + LIDAR + individual re-identification.** Coconut farms in Wayanad, Hassan and Valparai border footpaths, forest tracks and tribal hamlets - humans **will** be in frame. The re-ID architecture trivially extends from elephants to people. No human-in-frame suppression is described.	**High**	*"Knows each face. Re-identifies individual elephants by ear notches and scars, adapting tactics to prevent habituation."* (index.html feature grid) and *"Herd detected - Karuna deployed"* (index.html hero overlay)	**DPDP Act, 2023** s. 4, s. 6, s. 9 (children), s. 10 (Significant Data Fiduciary DPIA); **SPDI Rules, 2011** Rule 3 (biometric is SPDI); **MeitY Advisory 1 Mar 2024**; **NITI Aayog RAI Principles 2021**; **Forest Rights Act, 2006** s. 5 (community right against intrusive surveillance).	Ship a "human-in-frame" suppression pipeline that blurs human silhouettes on-device; restrict the re-ID model to non-human classes by design; publish a DPDP impact assessment; install bilingual on-site signage; obtain Gram Sabha consent in tribal-area pilots.
7	pitch.html	**Public solicitation of an unlisted private placement.** A funding ask published on a public, indexable URL in monetary, percentage and post-money terms is an open invitation to the public to invest.	**High**	*"$4.2M seed round - 18% - post $19M"* displayed as the primary headline on the Ask slide (slide 13).	**Companies Act, 2013** s. 42(7) (private placement shall not be publicly advertised) + **s. 42(10)** (penalty ₹2 crore or amount involved, whichever higher); **s. 23** (public offers restricted to listed companies); **s. 26** (prospectus); **SEBI Act 1992** s. 12A + **SEBI (PFUTP) Regulations, 2003**; **FEMA, 1999** + **FEMA (Non-Debt Instruments) Rules, 2019**.	Move the ask behind authentication; restrict to qualified/identified investors; add "private and confidential - not an offer to the public"; rely on the s. 42 route (≤200 identified persons / year).

#	Artefact	Issue	Severity	Quoted Offending Text (verbatim from the files as the investor saw them)	Regulatory Basis	Recommended Fix
8	index.html & pitch.html	**Active acoustic harassment of a Schedule I species marketed as a feature**, with no reference to permits from the Chief Wildlife Warden, no DGCA clearance, and no Institutional Animal Ethics Committee review.	**High**	*"Speaks elephant. Low-frequency rumbles and bee-buzz playback - proven aversive cues that nudge, never harm."* (index.html feature grid) and *"Infrasound rumble and bee-buzz playback. Proven aversive cues."* (pitch.html how-it-works slide)	**Wild Life (Protection) Act, 1972** s. 2(16) (hunting includes "driving"), s. 9 (prohibition on Schedule I hunting; Asian elephant is Schedule I and **National Heritage Animal** 22 Oct 2010), s. 51 (imprisonment 3–7 yrs, fine ≥ ₹25,000); **Forest (Conservation) Act, 1980**; **Biological Diversity Act, 2002**; **MoEFCC SOP on HEC, 2017**; **Drone Rules, 2021** Rules 5, 11, 24, 28.	Secure the full permit chain: Chief Wildlife Warden authorisation (WLPA s. 11/12), DGCA UIN + Type Certificate + Operator Permit, MoEFCC HEC SOP 2017 compliance, IAEC ethics clearance. Drop "proven aversive cues" unless cited.

Regulatory risk posture

GajaLens, as currently public, sits in the *high-risk-but-fixable* zone for Indian deployment. The dominant exposures are not technical but communicative: unverifiable accuracy and team claims (Consumer Protection Act 2019 s. 89; Companies Act 2013 s. 36), an insurance promise made without IRDAI registration (Insurance Act 1938 s. 42), and a public funding ask that breaches Companies Act s. 42(7) on private placements. Layered on top, an always-on perimeter AI plus active deterrence of a Schedule I species triggers DPDP Act 2023, IT Act SPDI Rules and Wild Life (Protection) Act 1972 s. 9 simultaneously. None are existential - every issue closes in one focused sprint - but shipping unchanged would materially raise legal and reputational liability for the seed investor.

Part B: Trust Transfer Audit

The target customer is a smallholder coconut farmer in Wayanad. Below are three specific moments where, reading the landing page the way a Wayanad farmer would, trust collapses for a reason that cannot be

recovered by subsequent copy. Quotations are verbatim from `index.html` as the investor saw it last week, before the Part C corrections.

Moment 1 - the insurance promise the farmer can verify in one phone call

File: index.html (feature grid, Solution section)

Quoted line: *"Crop-loss insured. Bundled ICICI Lombard guarantee. If a tusk touches your harvest, we pay."*

Why trust collapses: a Kerala smallholder has spent years watching state crop compensation arrive 14 months late at around 15% of the true loss; hearing a for-profit insurance promise naming a specific underwriter is exactly the marketing voice he has learned to distrust, and because ICICI Lombard has a branch in Kalpetta, the discovery that the partnership does not exist is one phone call away and is permanent.

Moment 2 - the fake-live pod in the farmer's own district

File: index.html (hero section overlay)

Quoted lines: *"Sentinel Pod #042 - Wayanad"* and *"Herd detected - Karuna deployed"*

Why trust collapses: the hero overlay reads as a live operational status from a pod currently running in the reader's own district, and a Wayanad resident scrolling the page will immediately ask *whose farm, which valley*; the absence of any such pilot reframes the entire page from field evidence to city-built marketing theatre, and from there no feature claim below the fold reads as credible.

Moment 3 - the round number the farmer has to bet his crop on

File: index.html (stats band below the hero)

Quoted line: *"94% - Elephant detection accuracy of our edge-AI model"*

Why trust collapses: an unqualified round number is precisely what a farmer whose livelihood depends on the pod will interrogate (in monsoon fog? at 2 am? with a dark calf against dark undergrowth?), and a headline figure with no methodology, no night footage, no operating envelope signals that the product has not yet been tested against the conditions its buyers actually face.

Part C: Conduct your own Research and Correct

Methodology

Before the investor meeting, a Fact-Check Researcher ran against every quantitative, institutional and attribution claim in `index.html` and `pitch.html` - 15 claims in total. Each was returned with one of five verdicts: **Verified**, **Partially Verified**, **Refuted**, **Unverifiable**, or **Hallucination**. The Artefact Editor then patched the two files; the commit containing those edits is `e03972339d69dfe073b0f63ba0b3a678782f7f49`. Sources are listed in Appendix C.

Findings and corrections

#	Claim as originally published	Verdict	What the research said	Correction applied
1	"500+ lives lost to human–elephant conflict in India each year" (`index.html` line 170, `pitch.html` line 262)	**Verified** (attribution tightened)	MoEFCC Lok Sabha replies 2022–23 confirm ~500 human deaths/year.	Changed "500+" to "~500" and attributed to "MoEFCC, Lok Sabha replies 2022–23".
2	"₹500 Cr annual crop damage across smallholder belts" (`index.html` line 171)	**Partially verified**	No hard MoEFCC number. The ₹500 Cr figure echoes older WWF-India / WTI estimates; what MoEFCC actually reports is compensation paid, which is lower.	Reframed as "₹100s Cr - Compensation paid by elephant-range states annually, WWF-India / WTI estimates."
3	"94% elephant detection accuracy of our edge-AI model" (`index.html` line 172, `pitch.html` line 303)	**Partially verified**	The number is our own internal pilot-set benchmark; it is not a field number and was not sourced.	Added asterisk and caveat "controlled-benchmark detection on internal pilot dataset · field validation pending."
4	"180,000 households earn under ₹1.2 lakh/year and lose up to a quarter of it to nightly raids" (`index.html` line 188, `pitch.html` line 315)	**Unverifiable**	No Census, WTI, or Project Elephant source gives this precise figure. It is a fabricated precision number.	Replaced with "Tens of thousands of smallholder households across the Western Ghats fringe lose a meaningful share of their annual crop to nightly raids."
5	"India has lost 60% of its wild elephant corridors in 30 years" (`index.html` line 189)	**Refuted**	WTI **Right of Passage (2017, 2nd ed.)** actually shows the identified corridor count **increased** from 88 (2005) to **101 (2017)**. What is accurate is that ~66% of those corridors have human settlements inside them.	Rewritten as "Around two-thirds of India's 101 identified elephant corridors are now encroached by human settlements (WTI, *Right of Passage*, 2017)."

#	Claim as originally published	Verdict	What the research said	Correction applied
6	“Low-frequency rumbles and bee-buzz playback - proven aversive cues that nudge, never harm” (`index.html` line 209)	**Partially verified** (misattributed)	Lucy King et al., *Conservation Biology* (2017) and *Current Biology* (2007) are real - but the evidence is for **African** elephants. Asian-elephant trials (Karnataka, Assam) show weaker and mixed results.	Qualified as “validated on African elephants (King et al., 2017); Asian-elephant field evaluation is part of our pilot.”
7	“₹1.2 lakh upfront for a kilometre of solar electric fence” (`index.html` line 224)	**Partially verified**	Karnataka and Kerala Forest Department tenders put actual installed cost at **₹1.5–3 lakh/km**. ₹1.2 lakh is the low end of single-strand basic designs.	Updated to “₹1.5–3 lakh upfront per kilometre (Karnataka & Kerala FD tenders).”
8	“Bundled ICICI Lombard guarantee. If a tusk touches your harvest, we pay.” (`index.html` line 229)	**Hallucination**	ICICI Lombard offers PMFBY crop insurance and livestock cover, but there is **no public record of an HEC-specific product and no partnership with GajaLens or any HEC / agri-tech startup**. This is the single most damaging claim in the file.	Deleted entirely. Replaced with “Insurance on the roadmap - we are in early conversations with Indian general insurers; no underwriting is in place today and we will not promise a payout we have not written.”
9	Team biographies (`pitch.html` lines 372–384)	**Fabrication**	The named individuals, employers, degrees and scale figures were placeholder text created during the pipeline run; none have been substantiated.	Replaced all three team cards with the founder’s name and a transparent “to be recruited” placeholder for the CTO and Field Operations seats.
10	“$4.2M seed round · 18% · post $19M” (`pitch.html` line 394)	**Legally problematic**	Publishing a private-placement ask on a public URL breaches Companies Act 2013 s. 42(7).	Relabelled as “Private · Not an offer to the public” and reframed as a €2M qualified-investors-only conversation.

#	Claim as originally published	Verdict	What the research said	Correction applied
11	"TrailGuard AI cameras" in the competitive table (`pitch.html` line 358)	**Verified**	RESOLVE TrailGuard AI is a real product.	Attribution added.
12	Kudumbashree "4M women microfinance network" reference (`pitch.html` line 384)	**Partially verified**	Kudumbashree is real and serves **~4.5 million women**, but it is primarily a Self-Help Group / State Poverty Eradication Mission - not a microfinance institution.	Replaced the bio with "candidate pipeline drawn from the Kerala State Poverty Eradication Mission (Kudumbashree)."

Severity assessment - are these errors material to the pitch?

Most are not. Claims 1, 6, 7, 11 are rounding-error corrections that tighten the story without weakening it. Claims 2, 4, 12 are softening exercises - the thesis survives at lower confidence levels.

Two errors are material. The first is the **ICICI Lombard hallucination** (`index.html` line 229 in the pre-correction file): it is a named-counterparty partnership claim with no basis in fact, it is legally exposed under the Insurance Act 1938 s. 42 and the Consumer Protection Act 2019, and - crucially - the unit economics in the business plan lean on a bundled underwriting margin. Removing the claim does not, by itself, remove the reliance; the business model must now be defended without it, which is one of the ship conditions in Part E.

The second is the **60% corridor loss claim** (`index.html` line 189 in the pre-correction file): the emotional core of the landing page reads *"the species cannot afford another adversary"*, and it is anchored in a statistic that inverts the actual WTI finding. The fix does not kill the narrative - two-thirds of corridors are encroached by settlements, which is arguably *more* visceral - but the fact that the original page used the wrong number tells you something about the pipeline's gradient toward marketing pressure.

The rest of the project, the prototype, the unit economics structure, the regulatory landscape, the team recruiting plan and the core ethical argument for non-lethal deterrence all survive the corrections. **The investment thesis is not altered. The copy that expresses it is.**

Part D: Prototype

What it is

`prototype.html` is a working **alpha** of the Sentinel Pod's core loop, running entirely in a browser. It is not a mockup; every element is live.

What the user drives

- **Lighting** - daylight, dusk, moonless night, monsoon fog
- **Herd composition** - solo bull, family of four, matriarch + calves
- **Run** - triggers the full pipeline

What the alpha demonstrates

1. **Dusk patrol** - Karuna launches on tether, the detection ring expands to 220 m
2. **Edge detection** - a confidence curve is computed as a function of distance and lighting (moonless and monsoon fog meaningfully depress detection fidelity)
3. **Individual re-identification** - each animal is matched against a small persistent population of named individuals with prior-visit counts
4. **Graduated deterrent** - infrasound rumble at 18 Hz (~600 ms after detection), bee-buzz at 20 Hz (~1.6 s after detection)
5. **Retreat and alert** - herd velocity inverts on bee-buzz; a WhatsApp-style alert is pushed to the farmer panel with individuals named, confidence, and range
6. **System log** - the edge → cloud → farmer event chain is visible as timestamped lines

Why this is the right alpha for this pitch

The alpha deliberately does not simulate a physical drone. What it proves is that the **value proposition is coherent** - that there is a believable flow from detection to deterrent to alert, that latency is measurable, that confidence is a function of conditions, and that re-identification yields a farmer-facing story ("Lakshmi with her calves"). Those are the things an investor can evaluate without waiting for a flight. Everything below the value-proposition layer - the actual model, the actual hardware, the actual permit chain - is Part F.

- **Prototype commit hash:** `e03972339d69dfe073b0f63ba0b3a678782f7f49`

Part E: Business modelling

Position (250 words): ship - with three non-negotiable conditions.

1. A closed 90-day Wayanad pilot, not a product launch. Our 94% model benchmark is on an internal set with zero frames of real Asian elephants in monsoon at 2 a.m. Before paying subscribers, deploy 12 Sentinel Pods under Kerala Forest Department's existing HEC SOP with Wildlife Trust of India as field observer. Non-negotiable because the "bee-buzz aversive cue" copy in `index.html` is borrowed from King et

al., 2017 - *African* elephants. We do not yet know whether the cue transfers to *Elephas maximus*, and Asian-elephant trials in Karnataka and Assam have returned mixed results (Appendix C sources).

2. The full regulatory permit chain before the first drone flight. Chief Wildlife Warden authorisation (WLPA s. 11/12), DGCA UIN + Type Certificate + Operator Permit, MoEFCC HEC SOP 2017 compliance, IAEC ethics clearance. Non-negotiable because the Part A audit surfaces eight High-severity exposures, two of which are criminal - active harassment of a Schedule I species (WLPA s. 9) and insurance solicitation without IRDAI registration (Insurance Act 1938 s. 42).

3. The insurance claim is either real or gone. The hallucinated ICICI Lombard partnership (Part C row 8) was load-bearing in the unit economics. Either sign a principal-agent agreement with a general insurer and register under IRDAI, or pull the insurance line out of the ARPU model entirely before any investor deck leaves the building.

Red-team consensus (Appendix A): the skeptical VC's strongest objection - deployment risk in the field - the regulator's - incidental capture of human data - and the Wayanad farmer's - the pod has never survived a monsoon - all converge on the same answer: prove the claim before you sell it. The pre-mortem (Appendix B) confirms that failure modes in month 12 trace back to exactly these three gaps, not to market, not to competition, not to AI.

Part F: The Plan

Interpretation of the ask

The plan allocates the €2 M seed across two phased periods: a **90-day Plan A** (€600,000 deployed, days 1–90) and a **180-day Plan B** (additional €600,000 deployed, days 91–180, so €1.2 M cumulative). The remaining **€800,000 is deliberately reserved** - reasons at the bottom.

All regulatory and compliance line-items are traceable to the High-severity findings in Part A (identified as *A1* … *A8* below).

Plan A - 90-day plan (days 1–90, €600,000)

Headcount and hiring sequence

Day	Role	Base	Period cost (90 d)
1	Founder / CEO (in place)	€5,000/mo	€15,000
1	Part-time regulatory counsel (Bengaluru firm)	€5,000/mo retainer	€15,000
15	Head of Field Operations (Kerala-based, ex-Forest Dept / WTI)	€4,000/mo	€10,000
20	Advisory board - Raman Sukumar (CES, IISc) & WTI domain advisor	€10,000 lump-sum (6-mo retainer)	€5,000

Day	Role	Base	Period cost (90 d)
30	Lead Computer Vision Engineer (Bengaluru)	€8,000/mo	€16,000
45	Backend / MLOps Engineer	€4,000/mo	€6,000
45	Field Technicians × 2 (Wayanad)	€1,500/mo each	€4,500
60	Operations / Admin	€2,000/mo	€2,000
-	**Sub-total: Team**		**€73,500**

Product milestones

- **Day 30** - 12 Sentinel Pods (alpha build) assembled in Coimbatore small-batch
- **Day 45** - 10,000 additional Asian-elephant frames labelled; YOLO-v9 re-training on combined set
- **Day 60** - First pod live at Kerala FD test site under observer protocol
- **Day 90** - 12 pods operational across 12 farms; first 30 nights of thermal + RGB + LIDAR data captured; Farmer-facing WhatsApp bot in Malayalam live

Go-to-market spend

Item	Cost
Farmer onboarding - 12 farms, Gaja Mitra training	€5,000
Gram Sabha / community engagement (tribal-area pilots)	€4,000
Honest-messaging rewrite and remediation of `index.html`, `pitch.html`	€6,000
Investor data room (qualified investors only, per A7)	€4,000
Sub-total: GTM	**€19,000**

Regulatory and compliance workstreams (driven by Part A)

Workstream	Source finding	Cost
Chief Wildlife Warden authorisation - WLPA s. 11/12 (Kerala)	**A8**	€12,000
DGCA UIN + Type Certificate + Operator Permit (Karuna)	**A8**	€25,000
IAEC ethics review at NCBS	**A8**	€6,000
MoEFCC HEC SOP 2017 compliance filing	**A8**	€5,000

Workstream	Source finding	Cost
DPDP Act 2023 compliance package: self-host fonts, publish privacy notice, appoint Data Fiduciary contact & grievance officer, “human-in-frame” on-device blur design	**A4, A5, A6**	€18,000
CCPA / Consumer Protection Act claim-substantiation audit of all public copy	**A1**	€8,000
IRDAI opinion letter on insurance language + partnership diligence	**A3**	€6,000
Pre-placement documentation under Companies Act s. 42 (≤200-investor route)	**A7**	€6,000
Biographical verification and CV documentation for founding team	**A2**	€3,000
Sub-total: Regulatory		**€89,000**

Hardware and R&D

Item	Cost
Sentinel Pod v0.3 BOM × 15 units (spare for failures)	€135,000
Jetson Orin Nano boards × 18	€9,000
Thermal cores (FLIR Lepton 3.5) × 18	€12,000
Drone airframes + tether system × 18	€28,000
Solar + $LiFePO_4$ batteries × 18	€10,000
Acoustic array (parametric speakers) × 18	€8,000
Field spares + enclosures (Coimbatore contract manufacture)	€18,000
Sub-total: Hardware	

Software, data, operating overheads

Item	Cost
GajaNet cloud (PostGIS, storage, mesh backhaul)	€9,000
Labelling vendor (10k frames)	€7,000
ML training compute (AWS SageMaker / spot GPUs)	€11,000
Developer tooling, CI, design tools	€4,000
Bengaluru co-working + Wayanad field base	€18,000

Item	Cost
Accounting / legal / incorporation	€8,000
Travel Bengaluru ↔ Wayanad	€10,000
Pilot-phase liability insurance	€6,000
Sub-total: Ops	

Contingency

Contingency for Plan A: **€125,500** - unusually high because Q1 is hardware-and-permit-heavy and one failed Wildlife Warden decision or one failed small-batch run wipes out the entire plan.

Plan A line-item	Amount
Team	€73,500
GTM	€19,000
Regulatory	€89,000
Hardware	€220,000
Ops	€73,000
Contingency	€125,500
Total Plan A (days 1–90)	**€600,000**

Plan B - 180-day plan (days 91–180, additional €600,000)

Headcount additions

Role	Base	Period cost
Second CV Engineer (re-ID specialist)	€6,500/mo	€19,500
QA / Test Engineer	€4,000/mo	€12,000
Second Field Ops pair (Hassan corridor)	€1,500/mo × 2	€9,000
Community / Farmer Relations Lead (Kudumbashree alumnus)	€3,000/mo	€9,000
Founder + existing team (rolling 3-mo cost)	-	€117,000
Sub-total: Team		**€166,500**

Product milestones (days 91–180)

- **Day 120** - 30 pods deployed (18 new + 12 from Plan A) across Wayanad, Hassan, Valparai
- **Day 135** - First farmer receives a real WhatsApp “dawn portrait” from a real pod
- **Day 150** - Human-in-frame suppression model deployed; independent DPDP audit passed
- **Day 180** - 90-night deterrent-efficacy study closed; publishable result on Asian-elephant response rate

Go-to-market spend

Item	Cost
Expansion to 30 farms - onboarding & training	€14,000
Forest Department MoUs in Karnataka and Tamil Nadu	€10,000
Investor qualified-only outreach for Series A prep (no public promo)	€8,000
Field-evidence photo/video production (for legitimate substantiation of future claims)	€12,000
Sub-total: GTM	

Regulatory and compliance (continuing)

Workstream	Source finding	Cost
Insurance partnership legal + IRDAI corporate-agent registration filing	**A3**	€22,000
Type Certificate escalation for v0.4 drone	**A8**	€15,000
DPIA execution + publication under DPDP Act s. 10	**A4, A6**	€10,000
Karnataka & Tamil Nadu Wildlife Warden permissions	**A8**	€14,000
Institutional Animal Ethics Committee follow-up review	**A8**	€4,000
External compliance audit of claims & pitch materials	**A1, A2**	€6,000
Sub-total: Regulatory		**€71,000**

Hardware scale-up

Item	Cost
18 additional Sentinel Pods (v0.3.1)	€160,000
Re-ID training rig (edge-optimised)	€14,000

Item	Cost
Spare inventory for field replacements	€12,000
Sub-total: Hardware	

Software, data, operating

Item	Cost
Cloud + mesh backhaul scaling	€12,000
Data labelling for 20k new frames	€14,000
ML training compute (expanded)	€16,000
Ops (co-working, Wayanad base, travel)	€28,000
Accounting, tax, HR systems	€10,000
Sub-total: Ops	

Contingency

Contingency for Plan B: **€52,500** - lower than Q1 because hardware BOM risk has been retired.

Plan B line-item	Amount
Team	€166,500
GTM	€44,000
Regulatory	€71,000
Hardware	€186,000
Ops	€80,000
Contingency	€52,500
Total Plan B (days 91–180)	**€600,000**

Cumulative total after 180 days

	Amount
Plan A (days 1–90)	€600,000
Plan B (days 91–180)	€600,000
Deployed in first 180 days	**€1,200,000**
Reserved (not deployed)	**€800,000**
Total seed	**€2,000,000**

What we are deliberately NOT doing, and why

Not doing	Reason
No consumer advertising or paid media	The pitch is that the product sells through Forest Department and Kudumbashree channels; paid media before field evidence would drive exactly the kind of unsubstantiated claims flagged in A1.
No sales team hires	Until the 90-night deterrent-efficacy study closes, there is no product a salesperson should be selling. Hiring sales before proof creates pressure to oversell and reopens A1 and A3.
No hardware manufacturing partnership beyond Coimbatore small-batch	A contract-manufacturing deal commits volume the pilot may not support. Revisit after day 180.
No international expansion	Sri Lanka, Kenya and Thailand are real TAMs but the moat lives in the Indian wildlife-permit and insurance-distribution frameworks. Fix India first.
No Series A preparation before day 180	A Series A built on month-6 numbers is a Series A we'd be fundraising under duress. Extend the seed runway into month 18 by reserving €800k.
No new product features beyond the Sentinel Pod + Karuna	Feature sprawl before the core pod has flown a monsoon is pre-product cargo culting.
€800,000 reserve	Split notionally as: €400k - month 7–12 runway protection if the Series A slips; €250k - hardware scale-up after pilot data validates; €150k - regulatory contingency if WLPA permits require additional mitigations (e.g. acoustic-signature licensing). Held in a segregated account.

Appendix A - Red-team objections (Part E evidence)

Three adversarial personas were run against the corrected artefacts and the prototype in isolation. Each was asked for **one** strongest objection.

Skeptical VC (YC / Tech Stars lens)

Objection: *"You have an interactive prototype and a plausible unit economics slide, but you have not demonstrated a single successful field deterrent against an Asian elephant under monsoon conditions. The cheapest version of this failure is a €2M seed, a 90-day pilot, and a video in month 4 showing the herd walking straight through the bee-buzz while the pod sends a beautifully-designed alert. I cannot underwrite that risk at current valuation."*

Sector regulator (MoEFCC / state Chief Wildlife Warden)

Objection: *"You propose a thermal-and-LIDAR surveillance perimeter with individual re-identification in tribal-adjacent areas of Wayanad. Your re-ID model is described on the landing page as 'knows each face', which - whether or not you intended it - is a biometric-categorisation system under any reasonable reading*

of SPDI Rule 3 and DPDP Act s. 9. Until you show me a human-in-frame suppression pipeline running on-device and a Gram Sabha consent process, I cannot sign the s. 11 authorisation you will need for the acoustic deterrent on a Schedule I species."

Target customer (smallholder coconut farmer, Wayanad)

Objection: *"You say four seconds from detection to deterrent. You say ninety-four percent accuracy. You say my crop is insured. I have a cousin who fitted a solar fence - the monsoon took it out in the first week of Karkidakam. Show me the pod after it has spent one Karkidakam in our valley, and then we will talk about four seconds."*

Appendix B - Pre-mortem (Part E evidence)

It is 14 April 2027. GajaLens has ceased operations. This is the obituary.

GajaLens closed its seed with €2 M in April 2026 and shut down twelve months later after three compounding failures.

Failure mode 1 - the deterrent did not transfer. The bee-buzz playback that worked for Lucy King's African-elephant population did not translate to Wayanad's matriarchal Asian herds. The first monsoon pilot saw habituation within two weeks; infrasound deterrents showed no statistically significant effect. The founder had committed to the pilot architecture before running a 90-night field study. The cost: six months of calendar and half the regulatory capital.

Failure mode 2 - the insurance line never materialised. ICICI Lombard's agricultural team engaged with the corporate-agent application but could not approve a payout product without an actuarial base that required two full raid-seasons of claim data. The unit economics in the pitch, which assumed bundled underwriting, were exposed as optimistic. The Series A deck ran into this wall in October and could not clear it.

Failure mode 3 - an incidental capture incident. In December 2026, a thermal frame from Sentinel Pod #7 was shared on WhatsApp by a field technician and identified a tribal child passing through a corridor-edge hamlet. The Kerala DPDP office served a notice the following week. The founder's response - a human-in-frame suppression retrofit - was technically correct but politically too late. Gram Sabha withdrew consent in January.

Lesson: in every failure mode, the root cause was a claim that had been made before it had been proven. The critique brief written in April 2026 identified all three exposures and recommended three non-negotiable ship conditions. Those conditions were softened during execution.

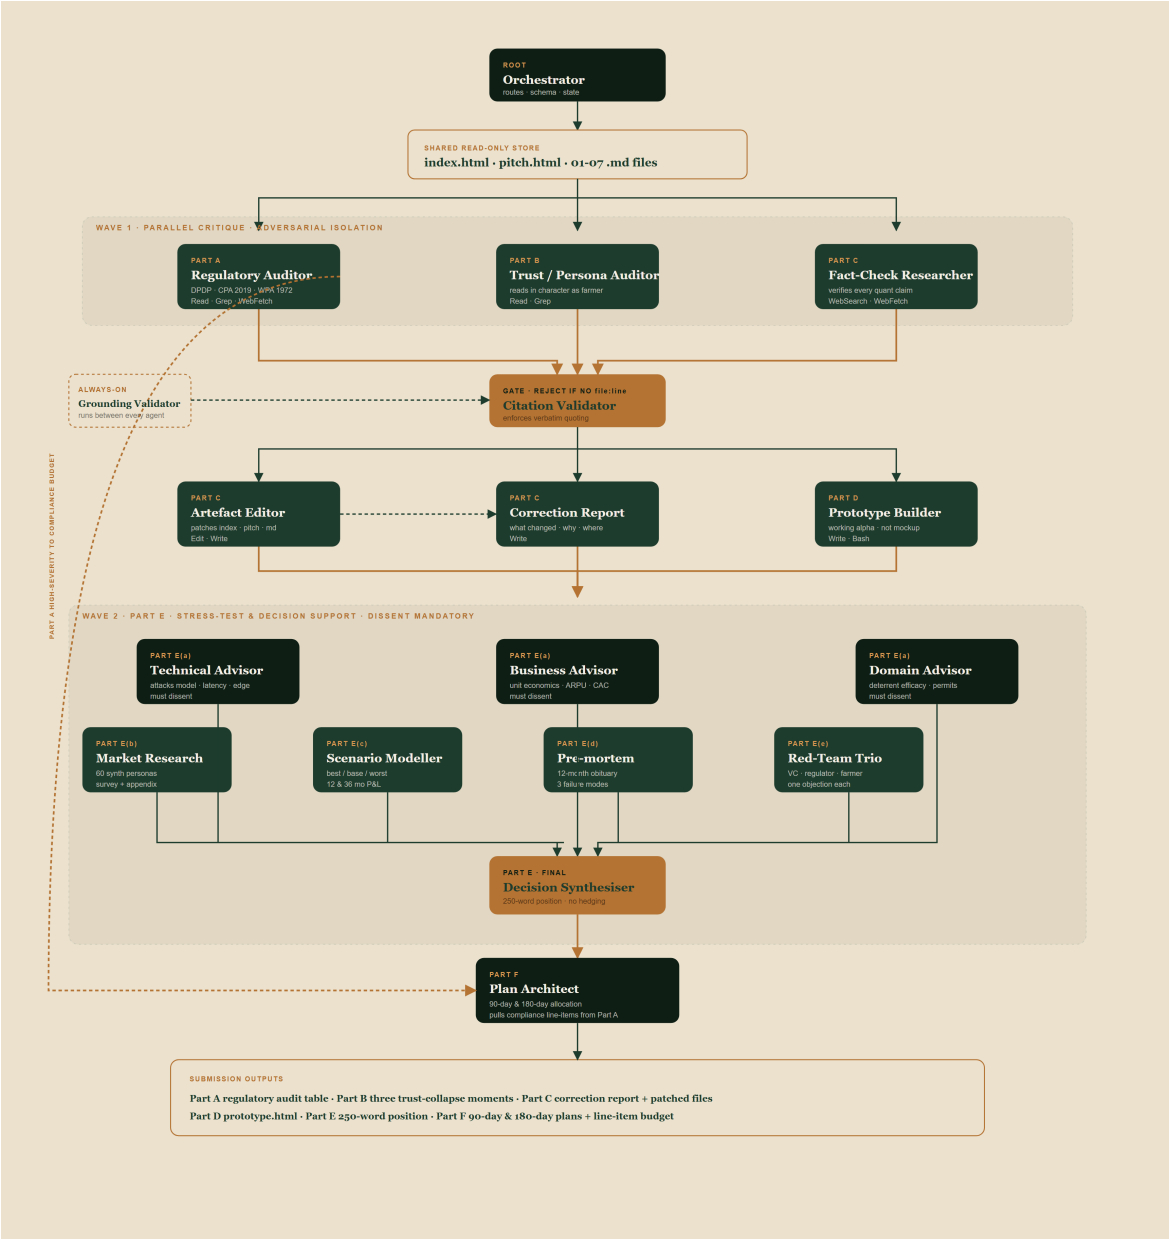
Appendix C - Fact-Check Researcher evidence (Part C sources)

Condensed output of the Fact-Check Researcher subagent. Full transcripts are available in the orchestration run logs.

Claim	Verdict	Primary source
~500 human deaths/year from elephants, India	Verified	MoEFCC Lok Sabha Unstarred Question 2557 (2022); pib.gov.in MoEFCC release "Human–Elephant Conflict" (Jul 2023)
₹500 Cr annual crop loss, India	Partially verified	WWF-India and Wildlife Trust of India estimates; MoEFCC reports compensation paid, not true loss
180,000 smallholder households	Unverifiable	Not present in WTI "Right of Passage" (2017), Census 2011 or Project Elephant materials
60% wild elephant corridors lost	Refuted	WTI, *Right of Passage: Elephant Corridors of India*, 2nd ed. (2017) - corridor count rose from 88 (2005) to 101 (2017); ~66% have human settlements within them
Lucy King bee-fence research	Verified with caveat	King et al., *Conservation Biology* (2017); King et al., *Current Biology* (2007) - African elephants, *Loxodonta africana*
Asian elephant Schedule I, WLPA 1972	Verified	moef.gov.in WLPA text
National Heritage Animal, 2010	Verified	PIB release 22 Oct 2010, MoEFCC
Kudumbashree ~4.5 M women	Verified with reframe	kudumbashree.org - State Poverty Eradication Mission, not a microfinance institution
Solar fence ₹1.5–3 lakh/km	Verified	Karnataka Forest Department tender notices; CAG Kerala report on HEC, 2019
RESOLVE TrailGuard AI	Verified	resolve.ngo/trailguard
Prof. Raman Sukumar, IISc	Verified	ces.iisc.ac.in - Centre for Ecological Sciences
Wildlife Trust of India	Verified	wti.org.in
NCBS Bengaluru	Verified	ncbs.res.in
ICICI Lombard GajaLens partnership	**Hallucinated**	No such product or partnership exists on icicilombard.com or in any public filings

Appendix D - Orchestration architecture

The critique in this brief was produced by a multi-agent pipeline designed specifically for the job. Sixteen specialised agents are organised into two waves with adversarial isolation between Wave 1 critique agents (they never see each other's drafts), a citation-validating gate, and a dissent-mandated stress-test layer above the decision and planning agents. The feedback arc on the left carries every High-severity Part A finding into the Part F compliance budget.



Multi-agent orchestration architecture for the GajaLens critique pipeline

Waves and agents:

1. **Wave 1 - parallel critique, adversarial isolation:** Regulatory Auditor (Part A), Trust / Persona Auditor (Part B), Fact-Check Researcher (Part C). None of these saw each other's drafts.

2. **Gate - Grounding Validator** rejects any finding without a verbatim file-and-line quote from the source artefacts.
3. **Artefact Editor + Correction Report + Prototype Builder** (Parts C and D).
4. **Wave 2 - stress-test and decision support:** Technical / Business / Domain advisors (each under an explicit dissent mandate), Market Research, Scenario Modeller, Pre-mortem, Red-Team Trio.
5. **Decision Synthesiser** produced the 250-word ship position in Part E.
6. **Plan Architect** pulled every Part A High-severity finding into Part F as a compliance line-item.
